

## DOMINO V10 Key Features and Benefits

Domino has helped business-savvy leaders achieve critical outcomes for years — it has always been a leader in application development, business transformation, and automation.

Version 10 is here to make Domino a dramatically more productive and modern platform, unleashing even more business value. This new version cements Domino as the foundation smart organizations need in their digital-transformation journey. Domino V10 will turbo-charge your existing investments, and make it easy to keep on reaping the benefits with new skills and capabilities. Here are few of the key features and benefits you can expect:

Feature	Benefit	Business Value
<b>IBM Domino App Dev Pack</b>	Domino developers can request early access to the world of JavaScript and Node.js through the IBM Domino App Dev Pack. As an add-on to Domino V10, both JavaScript and Domino developers will be able to enhance, integrate, and easily build new applications using Domino data.	The value of Domino has been extended dramatically with newer, more flexible and modern technologies, which opens the platform up to a broader set of talent and teams to make your IT solutions future-proof.
<b>IBM Domino Mobile Apps</b>	Domino developers can request early access to IBM Domino Mobile Apps, making their trusted, proven Domino apps accessible from an Apple iPad. Domino also replicates data between the server and local version of your applications, so your team can be productive even without network connectivity.	Your applications are available 24/7, from anywhere. More people use mobile applications when they need them. You increase employee engagement, raising productivity and delighting customers.
<b>Open, and easy to integrate</b>	Domino V10 brings dramatically easier integration with your most used applications, services, and environments. Now call any REST API that you want from your Domino application — bring in Google maps, pull in a Watson API, or even use customer data from Salesforce. Domino is more open than ever before.	The future of your business success rests on the IT architecture you define today.  Domino V10 has dramatically easier integration with a whole world of applications, services, and environments.
<b>Domino CentOS &amp; Docker</b>	Domino V10 now supports CentOS, which can be used to create Docker Domino containers that are 100% compatible with Red Hat Linux.  Users will now enjoy continuous deployment and testing, environmental standardization, version control, and the strong default isolation capabilities.	You can deploy your Domino solution on-premises, hybrid, and public — wherever it makes sense for your business.
<b>Cluster Auto-Repair</b>	Domino can automatically evaluate if a node requires repair and corrects the inconsistencies in so that eventually all nodes have the same and most up-to-date data.  Domino has security is built into the core. Now, with V10, it has more stability and availability than ever.	Spend less time managing your Domino environment, and more time on higher-value tasks that support the business.
<b>IBM Domino Applications on Cloud</b>	Move your Domino workflow and applications to the IBM Cloud. With IBM Domino Applications on Cloud, you gain access not only to a full stack of IBM Cloud security services, but also to an IBM security team supporting more than 12,000 customers in 133 countries.	Lower your total cost of ownership by 20-60%.
<b>Faster &amp; Leaner Notes Client</b>	Domino users will have a faster startup time (less than four seconds) and with optional feature installations each user can optimize their experience and client workload to suit their needs.	Transform everyday email into an operational center that helps you work more productively and achieve better business results.
